FACTORS THAT CHANGE THE TELEHANDLER LOAD CAPACITY
Carriage Type
Vertical Lift Height
Horizontal Reach Length
Boom Angle

Always refer to OEM’s operations manual load charts for your specific application.

Rated lift capacities are shown for telehandlers equipped with carriage and pallet forks.

Using other methods for lifting such as: chains, jibs, slings, etc. will change and alter lift capacities. Follow OSHA approved lifting methods including standard rigging safety guidelines.

Suspended loads should never be attached to chains or slings, over the fork carriage.

Be sure to look at the telehandlers load chart that corresponds with the attachment being used before starting the work.

Generally, fork carriage load charts are based on a horizontal load center that is 24 inches from the front vertical surface of the fork area.

Did you know?

Total Load: 8,000 LB

The 10042 short stick Telehandler can lift up to 37’ with the Outriggers Up or Down

The 10054 Telehandler can ONLY lift to 21’ with Outriggers Up or Down
